Ongoing Grant Support

NIH - 1R35GM138143 Huang (PI) 2020/07/01 - 2025/04/30

National Institutes of Health, National Institute of General Medical Sciences

Title: Dissecting natural variation in transcription factor - DNA interactions

Description: This grant aims to study the mechanisms of genome-wide transcription factor binding site changes and the resulting regulatory networks using diverse genomes and epigenomes of natural strains of Arabidopsis as model. We will build computational models of DNA sequence and non-sequence features for predicting binding variations, and experimentally validate the biological functions of selected binding site variants.

NSF - IOS-1916804 Huang (Co-PI) 2019/08/01 - 2023/07/31

National Science Foundation, Integrative Organismal Systems

Title: TRTech-PGR: Mapping and functional characterization of cis-regulatory module variation in plants

Investigators: Andrea Gallavotti (Rutgers University; PI), Naden Krogan (American University; Co-PI)

Description: This grant develops methods to map transcription factor-DNA interactions that enable comparative analysis of regulatory sequences in multiple genetic backgrounds. The methods will be applied in two species with different genomic properties: maize, a major monocot crop with a large genome, and Arabidopsis, a model eudicot with a compact genome.
